

Product Description

Description

XTRAX WEBView is the World Wide Web browser interface to the **XTRAX Tracker** family of exhibit property management software. Based on the Microsoft IIS web server, **XTRAX WEBView** integrates with **XTRAX Tracker** or **MultiTracker** to provide real-time item availability, event review and item requests. **XTRAX WEBView** uses the same **XTRAX** databases and images so the information is always accurate, current and up-to-date.

Features

Each **WEBView** user is assigned a username and password. A user may be granted access to selected inventories or to all inventories. A user may also be granted the option to add item requests to the “shopping cart.”

A user, after logging on and selecting the desired inventory, can view the specifications and stored image of individual items. The user can also review a list of all items with or without images. The user can access a list of archived and upcoming events and their property allocations (reservations). The user can determine which events will use a particular item over a range of dates. And, the user can check item future availability over a range of dates.

The user, if granted access to the “shopping cart”, may place the selected item(s) in the cart. Once all the desired items have been selected, the user can finalize the cart, indicating information such as event name, dates, location, address, etc. When the item request is placed, a message appears in the startup window of **XTRAX Manager** indicating that new **WEBView** item requests have been submitted. Using **Manager**, the request is processed and item reservations are automatically entered for the items requested.

Target Audience

XTRAX WEBView is designed for use by individuals within the organization (Intranet) as well as customers and supplier outside of the organization (Internet). Ideal internal users are those who need access to **XTRAX** information but do not need the full capabilities of **XTRAX Tracker** or **MultiTracker**.

Customization

XTRAX WEBView is implemented as a series of Active Server Pages (ASP) and an ActiveX (COM) object which encapsulates all database access and business logic. Using the provided programming guide, the “look and feel” of **XTRAX WEBView** can be easily modified to reflect the desired capabilities, color scheme, graphic elements, etc.

WEBView Buttons and Functions

Navigation Button	Function	Navigation Button	Function
Inventories	Select an inventory	Add to Cart	Add selected item(s) to cart
Items	Select an individual item or item list	Show Cart	List items in the cart
Current Item	Display the current item	Clear Cart	Clear item from cart
Check Availability	Check availability of the selected item(s) during a date range	Finalize Cart	Enter event information and submit request
Events Using	List events that use the selected item during a date range	Events	List upcoming events
Reports	Display Inventory Reports	Email	Email account representative
		Help	View help page
		Logout	Logout of WEBView
